

# industrial career technology training provides experience

**I**ndustrial Career Technology prepared students for their sought-after career choice once they graduated. Various options such as Welding and Cutting, Well Construction Technology, Electrical Technology, and Oil and Gas Production were offered to students interested in joining the work force. Career Technology programs provided dedicated students with the availability to alternative learning strategies, and passionate instructors gave their all to shape their students into successful people.

Students were given the chance to filter through the vast array of courses and programs offered, and these classes helped them find areas that they excelled in while also having fun. Each program supplied students with the essential tools and materials required to do well in their classes, and the necessary qualifications and standards were made known to students at regular intervals. Career technical students analyzed these expectations and made the decision to surpass them. Graduates proceeded to earn their certifications and degrees to become affluent members in their community.

“

*The excellent training and experiences that I recieved from the Well Construction Program were so valuable, and I am definitely excited to take this knowledge back to Pennsylvania with me.*

”
